(54) Title: CASE FOR A DISK

(57) Abstract: The function of a case is to protect a disc positioned inside the case from damages like scratches, fingerprints, dust or the like. When access the disk is needed, the case has to be inserted into a loading slot of e.g. a disk drive, thereby opening an access window of the case. Cases known from prior art have a rectangular shape and a moveable slider positioned at one side of the case. The present invention provides a case (1) for a disk (3), comprising at least two shells (4, 5), whereby said at least two shells are rotatable around at least one axis between a closed position and an open position, whereby outer side walls (11) of said shells (4, 5) define a triangular shape of the case in said closed position of the case, and whereby inner side walls (12) of said shells (4, 5) define an access window (14) in said open position of the case (1) providing access to the disk (3) through said access window (14).
